Latest month in the data	Freshness	Sep 2025	Info

Why only the total rows are used

The Comtrade file holds **total rows and breakdown rows** (by customs procedure, transport mode and partner area) for the same country and month.

Adding up every row gives **$1,832M**, which is **2.8×** the real value of **$665M**. This report keeps only the total rows.

Transport-mode detail is kept in its own table, so it can never be added to the totals by mistake.

Freshness: Data refreshed 11 Oct 2026. Latest month in the file: September 2025.
